

Andrey Shigantsov

Lead Backend Developer (Rust, AI-powered)

a.shigantsov@gmail.com | Telegram: [@rasaro89](https://t.me/rasaro89) | GitHub: github.com/andrey-shigantsov | GitLab: gitlab.com/andrey-shigantsov | Portfolio: [presentation](#)

SUMMARY

Lead backend developer with **14+ years of experience**, specializing in **Rust** and **AI-assisted software development**, with a track record across high-load microservices, Solana smart contracts, and embedded C/C++ systems. Experienced in leading distributed Agile teams and shipping production backends built through AI-agent workflows — from planning to automated and manual review. Continuously refines agent rules and skills to minimize token consumption and reach required code quality in the fewest review iterations. Strong team player: responsible, hardworking, adaptable, and focused on continuous improvement of skills and working methods.

Desired role: Lead Rust Backend Developer, full-time, remote

EXPERIENCE

BridgeApp

Rust Backend Developer — Aug 2025 – Present *Remote · Distributed team of Rust developers · Agile*

AI-powered collaboration platform. Backend development in Rust driven by AI agents.

- Developed Rust backend through AI-agent workflows (Opus 4.7, GPT 5.5, GLM 5.2; tokio, gRPC, Kafka/Redpanda, Redis, sqlx + PostgreSQL, and more).
- Built and maintained an integration testing system for gRPC services using sqlx-based tests in Rust.
- Refined a multi-stage AI development loop: detailed planning with an agent → agent implements → several review iterations by a second agent → thorough manual review → agent applies fixes.
- Authored and continuously improved agent rules and skills to minimize token consumption and reduce review iterations to reach target code quality, including tech-documentation rules that serve as the agent's persistent memory.
- AI tooling: Cursor; VS Code + magic-coder (TUI AI editor similar to Claude Code / OpenCode); [superpowers](#) and [andrej-karpathy-skills](#) plugins.
- **Open source:** github.com/MathAndMagic/bql — specification of a JQL-like query language with libraries for Rust, TypeScript, Swift, and Kotlin auto-generated from the spec.

STREAM TECH LLC (ООО «СТПИМ ТЕХ»)

Rust Backend & Solana Developer — Nov 2022 – Aug 2025 (2 years 9 months) *Remote · Distributed team of Rust developers · Agile*

Backend services and on-chain programs for blockchain products.

- Developed Rust backends (tokio, PostgreSQL, Solana, and more).
- Developed and maintained smart contracts for the Solana blockchain.
- **Open source (texture.fi):**
- [price-proxy](#) — Solana contract providing unified access to fresh prices from multiple arbiters; developed the system core and the testing system.
- [common/macros](#) — shared macros used across all contracts, programs, and services.
- [anchor-interface](#) — lightweight library for interacting with `anchor-lang` smart contracts.

TRADETECH DEVELOPMENT LLC (ООО «Трейдтех Девелопмент»)

Rust Backend & Solana Developer — Apr 2021 – Nov 2022 (1 year 8 months) *Fully remote · Distributed team of Rust developers · Agile*

High-load microservices and Solana DeFi infrastructure. Held partial project-lead responsibilities alongside development.

- **Project-lead duties:** team coordination, task tracking in Jira, planning and organizing work, daily progress monitoring, reporting on results.
- Built high-load microservices on async-I/O Rust (tokio, serde, prost, ClickHouse, and more).
- Developed smart contracts for the Solana blockchain.
- **Key achievement — DEX-connector smart contract** (Leveraged Staking project for texture.finance): a Solana contract for unified token exchange across multiple decentralized exchanges. At the time of writing it supported Orca / Whirlpools; the contract executes large-volume swaps distributed over time in small portions to minimize market impact.
- **Technologies learned on the job:**
- **Solana:** smart-contract development, automated testing (`solana-program-test`, `solana-test-validator`), interaction via the Rust client.
- **ClickHouse:** schema creation and maintenance, migrations for `golang-migrate`, interaction via the Rust client.
- **Grafana + Prometheus:** emitting metrics from Rust services and building advanced dashboards.
- **Apache Kafka:** consuming data via the Rust client.
- **Docker.**

KV-SVYAZ (НПООО «КВ-связь»)

C/C++ Programmer — Mar 2017 – Sep 2019 (2 years 7 months) *Software Development Project Lead / Scrum Master* — Mar 2019 – Aug 2019 (6 months)

Embedded and application software for communication systems.

- Developed embedded software in C (HOST, DSP) on Cortex-Mx and TMS320C674x cores.
- Developed application software in C++ with Qt.
- Authored technical documentation and typeset documents in LaTeX.
- **As Project Lead / Scrum Master:** strategic and operational planning, delivery to the customer, and oversight of the development process.

Freelance

C/C++ Programmer — Apr 2015 – Apr 2016 (1 year 1 month)

ONIIP

Software Engineer (2nd category) — Feb 2010 – Mar 2015 (5 years 2 months) · Omsk

EDUCATION

Specialist Degree, Information Security (Comprehensive Information Security of Automated Systems) Siberian State Automobile and Highway Academy (СибАДИ) — 2006 – 2011

SKILLS

- **Methodologies:** Agile, Agile/Scrum
 - **Languages:** Rust, C, Qt/C++
 - **Backend:** tokio, gRPC, REST, serde, prost, async-I/O
 - **Data & Messaging:** PostgreSQL (sqlx), ClickHouse, Redis, Apache Kafka / Redpanda
 - **Blockchain / Solana:** smart contracts, anchor-lang, DEX integrations, solana-program-test, solana-test-validator
 - **Observability:** Prometheus, Grafana
 - **Tooling & DevOps:** Docker, Git, GitLab, Jira, CI/CD
 - **Documentation:** Markdown, LaTeX
 - **AI-Assisted Development:** AI-agent workflows (planning → implementation → review loop), agent rules & skills engineering, tech docs as persistent agent memory
 - **Spoken languages:** Russian (Native), English (A2 – Pre-Intermediate)
-

RECOMENDATIONS

Latish Vladislav

To Whom It May Concern

Subject: Reference for Andrey Shigantsov

Dear Sir or Madam,

I worked with Andrey Shigantsov at MathAndMagic on the BridgeApp project, where he was involved in backend development for a microservice platform.

Andrey contributed to several important areas of the project, including task and workflow management, CRM and marketing campaigns, messaging services, user management, notifications, and activity history. He also worked on shared technical improvements, including service health checks, migration tooling, and integration testing.

Andrey actively participated in discussing and refining tasks, proposed solutions, and took responsibility for their implementation. He was engaged, responsible, and communicative. It was easy to work with him on both technical and organisational matters.

I am pleased to recommend Andrey as a backend developer who can work independently on complex tasks and collaborate constructively with a team.

Yours faithfully,

Latish Vladislav

Backend Team Lead
